To Isaiah

Thank you for letting me share this glorious day with you and your loved ones. Feel good. Feel proud. You’ve earned it.

In preparation for today, I asked your dean of students what she thinks is on your mind. So, she asked you. The word you used—many of you—was this one: Worried. You’re worried about the constant change around you, uncertain about the future of medicine and dentistry. Worried about whether you can make a decent living. You’ve boarded a boat, and you don’t know where it’s going.

I can reassure you. You’ve made a good choice—a spectacularly good choice. The career you’ve chosen is going to give you many moments of poetry. My favorite is the moment when the door closes—the click of the catch that leaves you and the patient together in the privacy—the sanctity—of the helping relationship. Doors will open too. You’ll find ways to contribute to progress that you cannot possibly anticipate now, any more than I could have dreamed of standing here when I was sitting where you are 40 years ago.

But look, I won’t lie; I’m worried too. I went to Washington to lead the Centers for Medicare & Medicaid Services, full of hope for our nation’s long-overdue journey toward making health care a human right here, at last. In lots of ways, I wasn’t disappointed. I often saw good government and the grandeur of democracy—both alive, even if not at the moment entirely well.

But, like you, I also found much that I could not control—a context torn apart by antagonisms—too many people in leadership, from whom we ought to be able to expect more, willing to bend the truth and rewrite facts for their own convenience. I heard irresponsible, cruel, baseless rhetoric about death panels silence mature, compassionate, scientific inquiry into the care we all need and want in the last stages of our lives. I heard meaningless, cynical accusations about rationing repeated over and over again by the same people who then unsheathed their knives to cut Medicaid. I watched fear grow on both sides of the political aisle—fear of authentic questions, fear of reasoned debate, and fear of tomorrow morning’s headlines—fear that stifled the respectful, civil, shared inquiry upon which the health of democracy depends.

And so, HSDM and HMS Class of 2012, I’m worried too. I too wonder where this boat is going.

There is a way to get our bearings. When you’re in a fog, get a compass. I have one—and you do too. We got our compass the day we decided to be healers. Our compass is a question, and it will point us true north: How will it help the patient?

This patient has a name. It is “Isaiah.” He once lived. He was my patient. I dedicate this lecture to him.

You will soon learn a lovely lesson about doctoring; I guarantee it. You will learn that in a professional life that will fly by fast and hard, a hectic life in which thousands of people will honor you by bringing to you their pain and confusion, a few of them will stand out. For reasons you will not control and may never understand, a few will hug your heart, and they will become for you touch points—signposts—like that big boulder on that favorite hike that, when you spot it, tells you exactly where you are. If you allow it—and you should allow it—these patients will enter your soul, and you will, in a way entirely right and proper, love them. These people will be your teachers.

Isaiah taught me. He was 15 when I met him. It was 1984, and I was the officer of the day—the duty doctor in my pediatric practice at the old Harvard Community Health Plan. My nurse practitioner partner pointed to an exam room. “You better get in there,” she said. “That kid is in pain.”

He was in pain. Isaiah was a tough-looking, inner-city kid. I would have crossed the street to avoid meeting him alone on a Roxbury corner at night. I’m not proud of that fact, but I admit it. But here on my examining table he was writhing, sweating in pain. He was yelling obscenities at the air, and, when I tried to examine him, he yelled them at me. “Don’t you f—g touch me! Do something!”

I didn’t figure out what was going on that afternoon. Nothing made sense. I diagnosed, illogically, a back sprain, and I sent him home on analgesics. Then, that evening, the report came: an urgent call from the lab. Isaiah didn’t have a back sprain; he had acute lymphoblastic leukemia. And we didn’t have his phone number.

The police helped track him down that night, to a lonely three-decker, third floor, a solitary house in a weedy lot on Sheldon Street in the heart of Roxbury. Isaiah lived there with his mother, brothers, and his mother’s foster children.

What followed was the best of care...the glory of biomedical science came to Isaiah’s service. Chemotherapy started, and he went predictably into remission. But we knew that ALL in a black teenager behaves badly. Unlike in younger kids, cure was unlikely. He would go into remission for a while, but the cancer would come back and it would kill him. Three years later, he relapsed.

I drove to his apartment one evening in 1987 and sat with Isaiah and his graceful, dignified mother around a table with
a plastic red-checkered tablecloth and explained the only
option we knew for possible cure—a bone marrow trans-
plant, not when he felt sick, but now, at the first sign of re-
lapse, when he was still feeling fine. He was feeling fine, and
I was there to propose treatment that might kill him.

They didn't hesitate. Isaiah wanted to live. He got his trans-
plant, from his brother. His course was stormy, admission
after admission followed, then chronic complications of his transplant—diabetes and asthma. His Children’s Hospital
medical record that year took up five four-inch-thick vol-
umes. But he got through. Isaiah was cured.

We became very close, Isaiah and I, through this time and
for years after—long conversations about his life, his hopes,
his worries. He always asked me about my kids. And his
mother, close, as well. An angel—a tough angel raised by
her sharecropper grandfather on a North Carolina farm, who
read Isaiah the riot act when she had to and who fiercely
protected him—and who, during the darkest times of his
course, continued to tend her ten foster children, as well as
her own.

I came to know Isaiah well, but it wouldn’t be quite right
to call us friends—our worlds were too far apart—different
galaxies. But my respect and affection for Isaiah grew and
grew. His courage. His insight. His generosity.

But there is more to tell.

Isaiah smoked his first dope at age 5. He got his first gun
before 10, and, by 12, he had committed his first armed robbed;
he was on crack at 14. Even on chemotherapy, he was in
and out of police custody. For months after his trans-
plant he tricked me into extra prescriptions for narcotics,
which he hoarded and probably sold. Two of his five broth-
ers were in jail—one for murder; and, two years into Isa-
iah’s treatment, a third brother was shot dead—a gun blast
through the front door—in a drug dispute.

Isaiah didn’t finish school, and he had no idea of what to
do for legitimate work. He got and lost job after job for not
showing up or being careless. His world was the street corner
and his horizon was only one day away. He saw no way out.
He hated it, but he saw no way out. He once told me
that he thought his leukemia was a blessing, because at least
while he was in the hospital, he couldn’t be on the streets.

And Isaiah died. One night, 18 years after his leukemia
was cured, at 37 years of age, they found him on a street
corner, breathing but brain-dead from a prolonged convul-
sion from uncontrolled diabetes and even more uncon-
trolled despair.

Isaiah tried to phone me just before that fatal convul-
sion. He had my home number, and I still have the slip of
paper on which my daughter wrote, “Isaiah called. Please
call him back.” I never did. He would have said, “Hi, Dr Ber-
wick. It’s Isaiah. I’m really sick. I can’t take it. I don’t
know what to do. Please help me.” Because that is what
he often said.

Isaiah spent the last two years of his life in a vegetative
state in a nursing home where I sometimes visited him. At

his funeral, his family asked me to speak, and I could think
of nothing to talk about except his courage.

Isaiah, my patient. Cured of leukemia. Killed by hope-
lessness.

I bring Isaiah today as my witness to two duties; you have
both. It’s where your compass points.

First, you will cure his leukemia. You will bring the ben-
efits of biomedical science to him, no less than to anyone
else. Isaiah’s poverty, his race, his troubled life-line—not
one of these facts or any other fact should stand in the way
of his right to care—his human right to care. Let the
Supreme Court have its day. Let the erratics and vicissi-
tudes of politics play out their careless games. No matter.

Health care is a human right; it must be made so in our
nation; and it is your duty to make it so. Therefore, for
your patients, you will go to the mat, and you will not lose
your way. You are a physician, and you have a compass,
and it points true north to what the patient needs. You will
put the patient first.

But that is not enough. Isaiah’s life and death testify to a
further duty, one more subtle—but no less important. Maybe
this second is not a duty that you meant to embrace; you
may not welcome it. It is to cure, not only the killer leuke-
mia; it is to cure the killer injustice.

Antoine de Saint-Exupéry wrote, “To become a man is
to be responsible; to be ashamed of miseries that you did
not cause.” I say this: To profess to be a healer, that is, to
take the oath you take today, is to be responsible; to take
the oath you take today, is to be responsible; to be
ashamed of miseries that you did not cause. That is a heavy
burden, and you did not ask for it. But look at the facts.

In our nation—in our great and wealthy nation—the wages
of poverty are enormous. The proportion of our people liv-
ing below the official poverty line has grown from its low
point of 11% in 1973 to more than 15% today; among chil-
dren, it is 22%—16.4 million; among black Americans, it is
27%. In 2010, more than 46 million Americans were living
in poverty; 20 million, in extreme poverty— incomes be-
low $11 000 per year for a family of four. One million Ameri-
can children are homeless. More people are poor in the
United States today than at any other time in our nation’s
history; 1.5 million American households, with 2.8 million
children, live here on less than $2 per person per day. And
50 million more Americans live between the poverty line
and just 50% above it—the near-poor, for whom, in the words
of the Urban Institute, “The loss of a job, a cut in work hours,
a serious health problem, or a rise in housing costs can
quickly push them into greater debt, bankruptcy’s brink, or
even homelessness.” For the undocumented immigrants
within our borders, it’s even worse.

For all of these people, our nation’s commitment to the
social safety net—the portion of our policy and national
investment that reaches help to the disadvantaged—is
life’s blood. And today that net is fraying—badly. In
2010, 20 states eliminated optional Medicaid benefits or
decreased coverage. State Social Services Block Grants

and Food Stamps are under the gun. Enrollment in the TANF program—Temporary Assistance to Needy Families—has lagged far behind the need. Let me be clear: the will to eradicate poverty in the United States is wavering—it is in serious jeopardy.

In the great entrance hall of the building where I worked at CMS—the Hubert Humphrey Building, headquarters of the Department of Health and Human Services—are chiseled in massive letters the words of the late Senator Humphrey at the dedication of the building in his name. He said, “The moral test of government is how it treats people in the dawn of life, the children, in the twilight of life, the aged, and in the shadows of life, the sick, the needy, and the handicapped.”

This is also, I believe, the moral test of professions. Those among us in the shadows—they do not speak, not loudly. They do not often vote. They do not contribute to political campaigns or PACs. They employ no lobbyists. They write no op-eds. We pass by their coin cups outstretched, as if invisible, on the corner as we head for Starbucks; and Congress may pass them by too, because they don’t vote, and, hey, campaigns cost money. And if those in power do not choose of their own free will to speak for them, the silence descends.

Isaiah was born into the shadows of life. Leukemia could not overtake him, but the shadows could, and they did.

I am not blind to Isaiah’s responsibilities; nor was he. He was embarrassed by his failures; he fought against his addictions, his disorganization, and his temptations. He tried. I know that he tried. To say that the cards were stacked against him is too glib; others might have been able to play his hand better. I know that; and he knew that.

But to ignore Isaiah’s condition not of his choosing, the harvest of racism, the frailty of the safety net, the vulnerability of the poor, is simply wrong. His survival depended not just on proper chemotherapy, but, equally, on a compassionate society.

I am not sure when the moral test was put on hold; when it became negotiable; when our nation in its political discourse decided that it was uncool to make its ethics explicit and its moral commitments clear—to the people in the dawn, the twilight, and the shadows. But those commitments have never in my lifetime been both so vulnerable and so important.

You are not confused; the world is. You need not forget your purpose, even if the world does. Leaders are not leaders who permit pragmatics to quench purpose. Your purpose is to heal, and what needs to be healed is more than Isaiah’s bone marrow; it is our moral marrow—that of a nation founded on our common humanity. My brother, a retired schoolteacher, tells me that he always gets goose bumps when he reads this phrase: “We, the people . . . .” We—you, and me, and Isaiah—inclusive.

It is time to recover and celebrate a moral vocabulary in our nation—one that speaks without apology or hesitation of the right to health care—the human right—and, without apology or hesitation, of the absolute unacceptability of the vestiges of racism, the violence of poverty, and blindness to the needs of the least powerful among us.

Now you don your white coats, and you enter a career of privilege. Society gives you rights and license it gives to no one else, in return for which you promise to put the interests of those for whom you care ahead of your own. That promise and that obligation give you voice in public discourse simply because of the oath you have sworn. Use that voice. If you do not speak, who will?

If Isaiah needs a bone marrow transplant, then, by the oath you swear, you will get it for him. But Isaiah needs more. He needs the compassion of a nation, the generosity of a commonwealth. He needs justice. He needs a nation to recall that, no matter what the polls say, and no matter what happens to be temporarily convenient at a time of political combat and economic stress, that the moral test transcends convenience. Isaiah, in his legions, needs those in power—you—to say to others in power that a nation that fails to attend to the needs of those less fortunate among us risks its soul. That is your duty too.

This is my message from Isaiah’s life and from his death. Be worried, but do not for one moment be confused. You are healers, every one, healers ashamed of miseries you did not cause. And your voice—every one—can be loud, and forceful, and confident, and your voice will be trusted. In his honor—in Isaiah’s honor—please, use it.
