Incidence of adverse events attributed to healthcare in a Department of Paediatrics

Fajreldines A, PharmD
Austral and Aleman Hospital, Argentina

INTRODUCTION

To know the rates of adverse events is not easy, there are several tools in the pediatric population such as the Pediatric global trigger tool (GTTP).

AIM

To measure the incidence of adverse events in a Pediatric

MATERIALES AND METHODS

Longitudinal incidence study.

RESULTS

318 patients were studied, mean age: 2.99 years (range: 0-17) 11% of events were found per 100 admissions, 15.5 events per 1000 patient days. The most

CONCLUSIONS

The rate of adverse events and triggers is lower than that reported by other studies.

Key Words: global trigger tool, adverse events, children hospitalized
