Abstract

The main focus of my project is to collaborate with a daycare and preschool center to try and minimize transmission of communicable diseases. To be able to accomplish this task, I hope to implement strategies and educate students and teachers on ways to stop bacteria, germs etc. from spreading as well as educate them on other ways to stay healthy during the school year. I hope to get some statistics on their current habits and create posters and handouts to refer to so I can evaluate their progress to see if the statistics improve over time.
