

[Oakland University, Auburn Hills, MI, United States]
[Noncompliance of CLABSI Prevention Interventions]

Aim: To increase compliance of interventions used to prevent central line associated bloodstream infections (CLABSI)

Measures: Number of CLABSI infections yearly, reported percentage of how often all interventions are used, reported percent of interventions used before education, reported percent of interventions used after education

Results:

Interventions:

- Use of biopatch on each central line upon accessing
- Education session including data for CLABSI rates in relation to noncompliance of interventions.
- Survey to compare reported rate of noncompliance before and after intervention.
