Pressure Ulcer Prevention

Establish standard processes to prevent pressure ulcers (a Centers for Medicare & Medicaid Services "never event").

<thead>
<tr>
<th>Cost to Implement</th>
</tr>
</thead>
<tbody>
<tr>
<td>The monetary resources required to implement this process</td>
</tr>
<tr>
<td><strong>Minimal:</strong> Just the cost of the improvement effort itself</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Time to Implement</th>
</tr>
</thead>
<tbody>
<tr>
<td>The amount of time, from months to years, it will take on average to establish this process</td>
</tr>
<tr>
<td><strong>Fewer than 12 months</strong></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Difficulty to Implement</th>
</tr>
</thead>
<tbody>
<tr>
<td>The challenges of implementing this process</td>
</tr>
<tr>
<td><strong>Most Challenging:</strong> Involves multiple units or disciplines AND requires a substantial shift in culture and/or operations</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Level of Evidence</th>
</tr>
</thead>
<tbody>
<tr>
<td>The degree to which the actions in this process are supported by research and experience; based on the Cochrane scale</td>
</tr>
<tr>
<td><strong>Some Evidence:</strong> Level III — Studies published with some control included</td>
</tr>
</tbody>
</table>
Details

Elements

- Conduct a pressure ulcer admission assessment for all patients
  - Perform an admission risk assessment on every patient.
  - Include reliable, detailed skin assessment for all patients.

- Reassess risk for all patients daily
  - Use a standardized tool to assess risk for all patients, at all levels of care.
  - Use visual cues to identify patients at risk, such as stickers on charts, logos on door and on the chart, etc.
  - Standardize interventions for at-risk patients.

- Inspect skin daily
  - Standardize documentation tools to ensure details of assessment are documented consistently.
  - Develop a process for daily skin assessment, and allow staff to develop a standard time of day to assess and document skin assessment.
  - Ensure that all staff are consistent with skin inspection and documentation standards.

- Manage moisture on skin
  - Develop a process (such as hourly rounds) for ensuring that patients are clean and dry.
  - Standardize skin care products, utilizing products that wick away or block moisture.
  - Use tools to ensure that appropriate supplies and products are at the bedside of at-risk patients (e.g., a skin care kit that includes supplies to clean patients, change pads, skin care products, etc.).

- Optimize nutrition and hydration
  - Develop a reliable process to consult the dietician when nutritional elements contribute to risk.
  - Ensure fluid balance by providing fluids and supplements as appropriate.

- Minimize pressure
  - Ensure a reliable process for redistributing pressure (e.g., use a turn clock as a reminder to staff, implement turn rounds, etc.).
  - Triage use of pressure redistributing beds and mattresses.

Outcomes

- Harm: Decreased harm to patient (e.g., Harms per 100 patient days, as measured by the IHI Global Trigger Tool)
- Cost of Care: Decreased cost per inpatient case

Service Lines and Critical Functions

- Applies in All Patient Settings
- Nursing
- Transitions and Continuity

Key Measures

- Percent of At-Risk Patients Receiving Full Pressure Ulcer Preventative Care
  
  This includes: Inspect Skin Daily, Manage Moisture, Optimize Nutrition, Reposition, Use Pressure-Redbribution Surfaces

- Pressure ulcer incidence

Reasons and Implications

Importance for Patients and Families

Patients and families are aware that pressure ulcers are painful and slow to heal, and are often seen as an indication of poor quality of care. When care givers practice the best care every time, patients can avoid suffering.

  Serious Reportable Events

- **The Joint Commission (TJC)**
  National Patient Safety Goal (NPSG) 14

Financial Implications

- Expense reduction can occur due to decrease in cost of pressure ulcer treatment and litigation events.
